EMS TRANSMISSION 10/18/99

FS- BLM-Instruction Memorandum No. OR-2000-003
Memorandum Expires: 09/30/2001

To: USDI Bureau of Land Management District Managers (Coos Bay, Eugene, Lakeview, Medford, Roseburg, Salem) and Field Managers (Arcata, Klamath Falls, Redding, and Ukiah); and USDA Forest Service Forest Supervisors Within the Area of the Northwest Forest Plan

Subject: Survey and Manage Management Recommendations - **Terrestrial Mollusks**

Background

The Northwest Forest Plan (NFP) includes measures to protect a variety of species associated with late-successional and old-growth forests (amphibians, mammals, bryophytes, mollusks, vascular plants, fungi, lichens, and arthropods). The Standards and Guidelines (S&Gs) require identification, mapping, and management of known sites of Component 1 and 2 Survey and Manage (S&M) species listed in Table C-3 (pp. C-4 to C-6 and C-49 to C-61).

To implement these provisions of the NFP, the Regional Interagency Executive Committee agreed in January 1995 to have the S&M Work Group coordinate preparation of management recommendations (MRs) for known sites. The Management Recommendations for 23 of the terrestrial mollusks listed in Table C-3 and on page C-6 (Protect from Grazing) have been completed. The remaining four Management Recommendations for *Cryptomastix devia*, *Megomphix hemphilli*, *Prophysaon coeruleum*, and *P. dubium* will be transmitted at a later date.

Effective Date of S&M Management Recommendations - Terrestrial Mollusks

This memorandum transmits 23 terrestrial mollusk MRs to field officials. These MRs should be utilized during the pre-decisional National Environmental Policy Act analysis. When MRs are not available, use professional judgment and Appendix J-2 to guide management actions (2620-3/2670(FS)1736-PFP(BLM-OR931)P, BLM-Information Bulletin No. OR-97-337, June 18, 1997).

It is the intent of these MRs that they be used by biological staff to reduce the risk to the species. The application of the recommendations, along with professional biological judgment based on local site conditions, will provide site management of these species in the context of NFP goals. Please follow the guidance (Enclosure 1) regarding use of these Mrs.

Review of S&M Management Recommendations - Terrestrial Mollusks

The MRs will undergo formal peer review in 1999 by selected scientists, managers, and agency staff knowledgeable about the species. In addition, all field offices are encouraged to provide comments. Comments are due before March 2000.

S&M Management Recommendations - Terrestrial Mollusks 2

If you have questions or comments concerning the enclosed MRs or guidance, please address any questions to Cheryl McCaffrey (BLM), Sarah Madsen (FS R-6), or Paula Crumpton (FS R-5). They can be reached at:

**GENERAL GUIDANCE
for use of
SURVEY AND MANAGE
MANAGEMENTRECOMMENDATIONS**

The following guidance was developed to assist field units in implementing management recommendations (MRs) for Component 1 and 2 Survey and Manage (S&M) species and Protection Buffer species and Protect From Grazing species: Terrestrial Mollusks.

1. Introduction

All MRs will be transmitted by joint Bureau of Land Management (BLM) / Forest Service (FS) memos.

MRs have been developed for use at field offices of the BLM and FS. Other agencies may find them useful as well.

MRs were developed primarily in response to the Standards and Guidelines (S&Gs) for Component 1 Survey and Manage species and Protection Buffer species.

It is the intent of these MRs to maintain a level of flexibility that allows for creativity of interdisciplinary (ID) teams in providing for management of the species in the context of other Northwest Forest Plan (NFP) goals. Where there are few known sites, it is especially important for these MRs to be followed in order to reduce any possible high risk to species survival in the NFP area.

2. Application of the MRs

The Executive Summary can be scanned for highlights about species. For example, look at range information and determine where a species is likely to be, get an idea of the species' habitat, and review what management options might be useful.

MRs were written primarily for use by botanists or biologists, but they also may be useful to others involved in project planning and design.

The enclosed MRs are effective as of the date of the transmittal memorandum, and replace the species management information contained in Appendix J-2 of the Final Supplemental Environmental Impact Statement.

The MRs apply to the species as they occur throughout the range of the northern spotted owl (or limited areas as noted in Table C-3 of the NFP S&Gs). The known site database (KSDB) and other credible locational data available to the field office should be used as appropriate to determine if a particular taxon is known within the project area. Use the MRs in concert with the most recently distributed version of the KSDB to aid in determining the range of each species relative to the project area.

Component 1 provisions for the protection of known sites apply to all activities (including, but not limited to timber sales) that may have adverse or beneficial effects.

For Protection Buffer species, these MRs serve as the management plans recommended by the NFP S&Gs on pp. C-20 and C-27.

Some MRs may suggest proactive management, such as prescribed fire, needed for species viability. Where such opportunities exist, managers are encouraged to implement these proactive recommendations.

3. Follow-up Actions

Field office staff who have expertise regarding these species may be asked to participate in revision of the MRs, in peer reviews, or on teams developing recommendations to change the status of certain species.

Field offices will likely be asked to provide information regarding their implementation of these MRs. Therefore, field office staff are asked to note pertinent aspects of the MRs, such as feasibility of implementation, appropriateness of the level of intensity, magnitude of implementation costs, and the accuracy of biological information.
